CEDAR INTERIORS

# INTERIORS THAT MATTER

*by Your Stoll's Woodworking Team*

Our "standard" cabinetry interiors are birch with UV clear coat. This light and airy wood has a fresh look. With the soft grain pattern & easy to clean UV coating, you will enjoy this timeless finish for years to come.

A classic upgrade is the gorgeous walnut interior. Its warmth and deep tones make your dishes and utensils pop with pride against this high-end curvy grain finish.

Another interior finish we love - the painted ones! We recommend any open cabinet to have the interior finished in the same color as the exterior. This creates a clean & simplistic feel that displays your items in an ageless way.

## THE LOOK THAT SMELLS GOOD

*by Amelia Rodriguez*

We were approached by a client with the desire of having cedar interiors in their new walk in closet. We couldn't refuse the look that smells good!

The practicality of the need: Our client has many sweaters and fine clothing that need special care & attention. Cedar is great all natural way to accomplish this goal.

Research shows: "It has a pleasant, clean fragrance that repels moths and other insects. Cedar also has a drying effect and will help prevent mold and mildew from forming. It is the "natural," organic solution to protecting fabrics like wool and is preferred by many homeowners over pesticide or chemical treatments."

Need assistance in deciding which interior to choose for your new cabinetry?

Reach out to one of our in house designers for the full run-down on each interior finish option. We will be happy to help make this choice both easy and well informed to put your mind at ease.

# PROJECT OF THE MONTH

FULLY  
ADJUSTABLE  
ROLLOUT TRAYS

## SIMPLISTIC TAKE ON FUNCTION

*by Your Stoll's Woodworking Team*

This month's project highlights ingenuity when it comes to style in small spaces. Our client desired a contemporary kitchen with a timeless feel. They had many fun ideas on how to dress up this kitchen but also didn't want to overwhelm this tight space with too much "design."

Our design team helped tailor the ideas into a functional yet tasteful aesthetic. The island, being the center of the attention, needed to be light; therefore, we opted for metal legs and countertop stand-offs to give it a floating look. Even with this custom fabricated island height, we made sure to accommodate a double trash pullout and deep storage drawers. Form always follows function.

We were given this great opportunity through one of this area's finest contractors, Loren Wood Builders. Their team makes each project a joy to work on!

# THE LIGHTING THAT MATTERS

## WHY IT'S IMPORTANT TO INTEGRATE LIGHTING.

by Ryan Graber - Lighting Specialist

We offer fully integrated LED lighting in every area you can think of: toe kick lighting - ideal of mid-night snacking, under upper cabinet lighting - gives you perfect lighting for prepping food, & interior lighting - not only for the glass door cabinets but also for the deep pantry cabinets. You will no longer need to strain to see what you have in your pantry. It will be lit up for easy access.

What does fully integrated mean? We pride ourselves in creating the upmost best looking and functional products so we simply had to offer lighting. No more exposed wires running underneath or in your cabinets. All wires are tucked away not interfering with your shelving or hinges. On all the undersides of our cabinets, we provide a finished skin with a routed channel that fits our lighting extrusion perfectly. We then place a defusing lens over the LED strip for smooth under cabinet bottom.

We offer multi-white & set cool - warm temperature lighting - all controlled by your choice of a remote: mounted single button or on your phone through Bluetooth!

## THE PROFILES

# WHAT TRENDS YOU SHOULD WATCH FOR

*by Amelia Rodriguez*

As Europe leads the way, The States are starting to feel the stream of thin lines not only in the rift white oak grain patterns but also in our door styles. With Thin Shaker replacing the standard, does your home have simplistic profiles to fit this next season?

We are so happy to announce a new line of cabinetry door profiles to set your sights on for your next project! We have custom designed and fabricated these unique profiles that add character to your frameless or flush inset cabinetry. The possibilities are endless when it comes to door design. Do you have a look you are going for but no one offers it? Ask us if we can create a door profile custom to you!
